SUMMARY

Product and UX designer with fintech startup experience, designing web and mobile products from user flows and wireframes to high-fidelity prototypes. Works directly with founders and engineers, and designs to Apple's Human Interface Guidelines and Material Design. Based in Accra and available for remote work.

PROFESSIONAL EXPERIENCE

Product Designer | Soia Finance, Accra, Ghana — August 2025 to January 2026

- Led end-to-end UX/UI design for a pre-seed fintech startup, from user flows to high-fidelity web and mobile mockups.
- Worked with founders and engineers in an agile team, turning user feedback and business goals into product decisions.
- Built investor pitch decks that communicated product vision and design strategy.

UX/UI App Designer | Mentor-Guided Projects — 2025

- Designed full UX/UI for two client mobile apps, Gyeme and Glide, delivered as high-fidelity prototypes.
- Iterated on client and mentor feedback to produce scalable, user-centred interfaces.

SELECTED PROJECTS

Lign: Institutional Transport App | Final Year Project — 2025

- Designed a mobile app that helps institutions such as schools and companies run student and staff commutes, grounded in surveys of students, workers and fleet managers.
- Designed deferred-activation bulk tickets, so students can buy a batch up front and activate each one only when needed, matching how they receive allowances.
- Designed a Hop-On feature that lets a student who misses their usual bus join another one passing nearby.

InForm: Diabetes Health Management App | Independent Project — 2024 to Present

- Designed a mobile app that helps people with diabetes log blood sugar, insulin and meals, and get meal suggestions based on what they log, without feeling overwhelmed.
- Used one floating action button for all logging and tagged meal suggestions with nutrition info, so users need no expertise.
- Cut onboarding to two short steps and moved non-essential questions into an editable profile.

Crop Care: Maize Leaf Disease Detector | Team Design Project — 2024

- Designed the end-to-end UX and interface for an AI-powered tool that lets smallholder farmers diagnose maize leaf diseases from a photo, shaped by secondary research and informal conversations with farmers.
- Joined a student team from another department as the designer; the project supervisor endorsed potential funding for the design in the AgriTech sector.

SKILLS

Design & Prototyping: Figma (Advanced), Adobe XD, wireframing, high-fidelity prototyping, user flow mapping, Apple Human Interface Guidelines, Material Design

Research & Process: Usability testing, survey design, competitive analysis, accessibility, agile methodology, clear communication

Web: HTML, CSS

EDUCATION

Ghana Communication Technology University, Accra, Ghana — Awarded November 2025

B.Sc. Information Technology, Second Class Honours (Upper Division)

Thesis: "Design and Development of an Efficient Bus Tracking Management System", Grade A (80/100)

Relevant coursework: Human-Computer Interaction (A), Artificial Intelligence (A), Research Methods (A-)

ADDITIONAL EXPERIENCE

National Service Personnel (Photographer) | Ablekuma North Municipal Assembly, Accra — February to September 2026

- Guided couples through marriage registration, explaining procedures clearly during a stressful process, and managed client flow and records on busy days.

Transport Management Assistant (Intern) | Rigworld Solutions, Accra — Sept to Nov 2024

Peer Tutor (Informal) | Human-computer interaction and programming, Accra — 2023 to 2025
