SUMMARY

Product designer with a B.Sc. in Information Technology and client, contract and startup experience across mobile, tablet and desktop, including remote work for a US company. I design end-to-end flows, from user research to high-fidelity Figma prototypes, alongside founders and engineers in an agile team. Guided by one principle: fluency without learning.

EDUCATION

Ghana Communication Technology University, Accra, Ghana Awarded November 2025
B.Sc. Information Technology, Second Class Honours (Upper Division), equivalent to a UK 2:1
Thesis: "Design and Development of an Efficient Bus Tracking Management System", Grade A (80/100)
Final year GPA 3.45. Coursework: Human-Computer Interaction (A), Artificial Intelligence (A), Research Methods (A-)

PROFESSIONAL EXPERIENCE

Product Designer | Soia Finance, Accra, Ghana August 2025 to February 2026
- Partnered with other designers on end-to-end UX/UI design for a pre-seed fintech startup, from user flows to high-fidelity web and mobile mockups.
- Worked with founders and engineers in an agile team, turning business requirements and user feedback into decisions.
- Built investor pitch decks that communicate product vision and design strategy.

UX/UI App Designer | Mentorship Projects 2025
- Designed full UX/UI for two client mobile apps, Gyeme and Glide, as high-fidelity prototypes, iterating on client and mentor feedback.

Product Designer (Contract) | Zimmer Logistics, United States (Remote) November 2023 to March 2024
- Designed the company website and a logistics tracking dashboard, from user flows to high-fidelity desktop screens.
- Designed a hospital management dashboard, organising dense operational data into clear, scannable views.

SELECTED PROJECTS

Clostra: Escrow Fintech Platform | Personal Project
- Designed the desktop dashboard for an escrow platform where payment is held until the other side delivers, with an AI assistant for deposits, tracking, releases and dispute help.

InForm: Diabetes Health Management App | Independent Project March to October 2026
- Designed a mobile app that helps people with diabetes log blood sugar, insulin and meals, and get meal suggestions based on what they log, without feeling overwhelming.
- Used one floating action button for all logging, and cut onboarding to two short steps by moving non-essential questions into an editable profile.

Lign: Institutional Transport App | Final Year Project 2025
- Designed a commute app for schools and companies, grounded in surveys of students, workers and fleet managers.
- Designed bulk tickets that activate one at a time, matching how students receive allowances.

Crop Care: Maize Leaf Disease Detector | Team Design Project 2024
- Designed the UX and interface for an AI tool that lets smallholder farmers diagnose maize leaf diseases from a photo.

SKILLS

Design & Prototyping: Figma (Advanced), Adobe XD, interaction design, wireframing, user journey mapping, high-fidelity prototyping, mobile and web design
Design Systems & Guidelines: Apple Human Interface Guidelines, Material Design, accessibility
Research & Process: User research (surveys and interviews), competitive analysis, agile methodology, clear communication
